# Horizon 2020 Energy Efficiency Call EE-05 Deep Renovation of Buildings

## BUILD UP Webinar #BUevent

***'Increasing energy performance of existing buildings through process and organisation innovations and creating a market for deep renovation', deadline on 04 June 2015.***

*Monday, 27 April, 15:00-16:30 (Brussels time)*

*Presentation given by EASME Project Advisors:*

*Ms Janna SCHÖNFELD*

*Ms Zoé WILDIERS*

# Agenda

## 1) Presentation 1 on the EE-05 2015 call:

- *The policy context*
- *Challenge, budget, scope, impact of proposals*
- *Lessons learnt and FAQ*

## 2) Presentation 2:

### How to write a good proposal

- *What is expected from proposals*
- *Do's and don'ts*

## 3) Discussion of questions

# EU Policy context: Energy efficiency in buildings

EU 2020 Targets | EU 2030 target

Energy Efficiency Directive

Energy Performance of Buildings Directive

Eco Design Directive

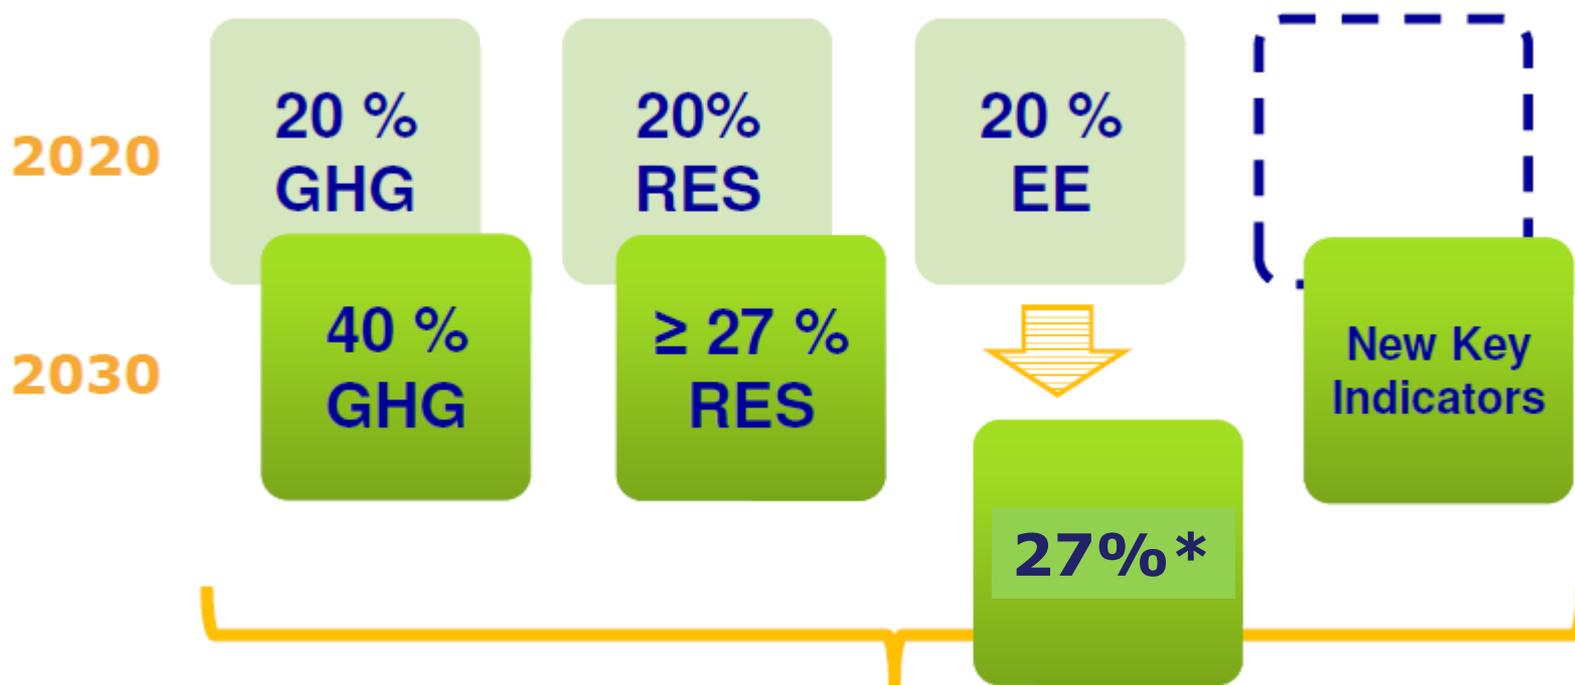

Your national and regional policy context

European  
Commission

## EU 2030 Framework on climate and energy

**New governance system**

6

## EE-05 Deep renovation of buildings

### Challenge:

- *Create a market for deep renovation*
- *Increase the rate of deep/NZEB renovation*
- *Process and organisation innovation*

### ***Indicative budget of a proposal:***

*€ 1.5-2 million EU support*

*(Although this does not preclude submission and selection of proposals requesting other amounts)*

## EE-05 Deep renovation of buildings

### Scope:

- *Remove market barriers*
- *Interventions across issues and actors*
- *Trigger structural changes in the market*
- *All buildings types – focus on existing and most inefficient*

## **EE-05** Deep renovation of buildings

**Include at least one of the following 3:**

- 1) Product and process innovation in the construction sector for product offerings on the market*
- 2) Regulations, property valuation, decision-making tools for renovation, quality standards, inspection/monitoring*
- 3) Enabling conditions for finance*

## EE-05 Deep renovation of buildings

### Impact:

- *Trigger the renovation of existing buildings towards high energy performance or raising quality and compliance*
- *Target: at least 25 GWh per year savings per million Euro of EU support*
- *Measured also by:*
  - 1) Investments in sustainable energy
  - 2) Better implementation of policies
  - 3) Influence on relevant actors

## EE-05 Deep renovation of buildings

### Lessons learnt from first call 2014:

- *Difficulties focusing the proposal (on deep renovation).*
- *Proposals need to be clear, specific, coherent and quantified.*
- *Quantified impacts during project period need to be constructed from baselines and descriptions of the state-of-the-art.*
- *Unclear how impacts will be measured*
- *Too much focus on analysis of state-of-the-art, at the detriment of concrete new actions and testing/monitoring.*

# EE-05: Frequently Asked Questions

## ***Do we need to include renewable energy?***

Renewables need to be taken into consideration for any deep renovation. Proposals may then decide whether it is feasible or cost-effective, but these should be considered.

## ***What do you mean by we are expected to reach the energy savings of 25 GWh/year/million of EU support? By when?***

The expected impacts in terms of energy savings and/or renewable energy production are expressed as **primary energy**. They refer to the expected energy impact to be **triggered by the end of the project**. The templates for proposal submission include tables and guidance for presenting these impacts within a proposal.

# EE-05 Frequently Asked Questions II

## ***Is there a definition of 'deep renovation'?***

A '**deep renovation**' in accordance with the Energy Efficiency Directive (see recital 16), is a **cost-effective renovation** which leads to a refurbishment that reduces both the delivered and final energy consumption of a building by a **significant** percentage compared with the pre-renovation levels leading to a **very high energy performance**. Such deep renovations could also be carried out in stages.

## ***What do you expect in terms of energy savings from a deep renovation?***

The European Commission Staff Working Document (SWD(2013) 143 final) indicates that the significant efficiency improvements resulting from deep renovation are **typically of more than 60% energy savings**.

Projects funded through H2020 Energy  
Efficiency 2014 call for proposals:

[https://ec.europa.eu/easme/sites/easme-site/files/Energy-efficiency-Call-2014\\_funded-projects.pdf](https://ec.europa.eu/easme/sites/easme-site/files/Energy-efficiency-Call-2014_funded-projects.pdf)

- *When the call says that the expected impact of the proposals should result in energy savings of at least 25 GWh/year per million EUR of EU support...what does it mean? Is it talking about final energy savings, about primary energy savings?*
- *This saving should be achieved during the project or can be something that we can expect achieve thanks to the project in the future?*
- *On the other hand, we can read also in the call EE05 that this expected impact can be measured in terms of investment made by stakeholders in sustainable energy; better implementation of energy-efficiency policies; and number of policy makers or building owners/operators influenced. My doubt is if we have to quantify all these impact in terms of energy saved?*
- *In case yes, is there any official calculation method or some official database to calculate, for example, how much energy we can save per each building/operator owner influenced?*
