Ecodesign and Energy Labelling of electrical heat pumps

Two European Directives –the Ecodesign and Energy Labelling Directives– and their accompanying regulations have introduced new minimum requirements for heating appliances, as well as a label to inform about their performances. This article presents these requirements and the foreseen label in respect to electrical heat pumps.

BUILD UP Webinar Recordings | Quality management within building commissioning

This webinar focuses on solutions and strategies for quality (and data) management in new buildings, focusing in particular on the Building Commissioning Process (Cx). Previous experience has shown the importance of this process in delivering energy-efficient and healthy buildings but Cx often lacks a proper quality management system and tools to implement it.

As a result, there is an opportunity for new tools and methodologies to support its quality assurance.
